

## FOAM BASS TRAPS

Acoustical Bass Traps can be mounted in any 90° corner between two walls or a wall and a ceiling.

### Installation

- It can be attached directly to the surfaces using hook and loop Velcro.

*Note: For best results clean wall surfaces before applying the pressure sensitive adhesive backing on the Velcro to the wall or use a hot glue gun to attach the Velcro to the wall.*

- Water based panel adhesive can also be used to adhere the corner trap in place.

*Note: We recommend AlphaPanel™ adhesive which can be used in any standard caulk gun.*

- If there is no 90° corner available, or if the corner is suitable, the Acoustical Bss Trap can be stacked in a freestanding configuration.
