

SOUND BLANKET ENCLOSURES

DESCRIPTION

Sound Blanket Enclosures are custom made from modular sound blanket panels to very effectively absorb noise energy and block sound transmission.

These sound enclosures are available in interior or exterior grade, as well as with a silicone facing for high temperature applications.

Depending on the desired function and performance, these blanket enclosures are manufactured using the [ABBC-13 AudioSeal™](#) or the [ABSC-25 AudioSeal™](#) Sound Blankets. Please visit the individual product pages for additional information.

The blanket panels used offer superior acoustical performance and the flexibility to design-to-order with many available options, such as additional colors, doors-openings, windows and a variety of sizes.

TECHNICAL CHARACTERISTICS

Size	Custom
Blanket Models	ABBC-13, ABSC-25
Colors	Gray, White, Black, Tan, Blue

FEATURES

- Optional door openings
- Custom colors
- Class 1 Fire Rated
